north. Before the war, the goldfields gave work to about 15,000 natives, chiefly Wanyakyusa, and most of the foodstuffs from this district went there. The goldfields are gradually closing due to difficulties in obtaining spares, and it has been necessary to look for outlets for Tukuyu produce elsewhere. Should the goldfields open again after the war, and large-scale mining start, there is a great future for produce grown in Tukuyu.

The main income of the tribe is derived from agricultural, military, mining and public works sources, and it is estimated that in 1941 the average annual income per man, woman and child was about Sh. 10 per year. It has risen considerably since, as over 4,000 men have joined the military and a large part of their salaries comes back to the district in the form of remittances. The agricultural source, from which a larger part of the tribal income accrues, is from sales of rice, maize and other foodstuffs. A fair number of Wanyakyusa also work on the tea plantations.

The picture sketched above will show that the district is inhabited by a tribe whose agriculture is of great interest, since the variety of crops, from wheat in the highlands to paddy and cotton on the lake shore, is perhaps unrivalled in so small an area elsewhere in East Africa. It has not been possible to fill in the picture with details of the people's character, but it is worth mentioning that the Wanyakyusa are a people difficult to administer, argumentative, litigious, self-willed and at times inclined to truculence. Nevertheless their intelligence is such that they are willing to be persuaded, and, once convinced of the benefit of any change, adopt it with energy. This is instanced by the way they have in a few years accepted the principles of anti-erosion to such an extent that now there is perhaps 90 per cent control in the well-populated areas. It should, however, be stressed that, though the soil is not being eroded to any great extent, it is still being impoverished, since increased cultivation for the war effort has involved breaking a great deal of new land with a consequent lessening of fallow. Overcropping in the hilly country is very great and, in order to prevent further emigration, it behoves the native planters to learn to put something back into the soil in the form of mulch or compost. If care is not taken, a comparatively prosperous country will one day become like so many parts of Africa, where a losing struggle is fought with Nature to obtain a sufficiency for the people's needs.
